

Four NewVision Customers Implement NewVision RecordsNG Public View System

New Canaan, Connecticut – (July 26, 2010) -- NewVision Systems Corporation is pleased to announce that four customers have recently implemented the .Net based NewVision RecordsNG Public View System:

- Osceola County (Kissimmee), Florida
- Martin County (Stuart), Florida
- Columbia County (Hudson), New York
- Ocean County (Toms River), New Jersey

The RecordsNG Public View System is the first implementation of the NewVision RecordsNG (“Next Generation”) suite of products that automates the recording and retrieval of official records by Clerks, Registers and Recorders. Based on the Microsoft .Net platform, the RecordsNG Public View System enables a single user interface for both local and remote internet users.

The System also adds a host of features to improve the speed and efficiency of records searching for both the Clerk’s staff and the public. The new system offers options for basic searches and provides an advanced search capability geared toward professional searchers. The advanced capability enables compound searches that may include multiple names, date ranges and document type restrictions. The .Net based interface also enables searchers to tailor the display of search results – including desired columns, font types and sizes - to their individual needs.
